U.S. AIR FORCE CAREER OPPORTUNITIES

NO EXPERIENCE REQUIRED

If you've got a high school diploma, there's a career waiting for you in the U.S. Air Force. Get immediate, on-the-job technical training with pay — and watch your career take off. There are over 140 different enlisted career fields to choose from.

It starts with your ability to perform a job that you've already got a knack for — whether you know it or not. That's why we use the Armed Services Vocational Aptitude Battery scores to help you choose from the jobs for which you're best suited.

Aptitude areas include mechanical, administrative, general and electronics, and each area encompasses dozens of jobs in which you have the potential to excel. Our technical training is outstanding. We'll send you to a school, pay you while you learn, and you'll earn college credit for your training through the Community College of the Air Force. Plus the Air Force also pays for valuable licenses and certifications that are directly transferable to jobs in the civilian market.

MECHANICAL

You could help keep some of the most advanced aircraft and technological equipment in the world in top shape. Air Force aircraft fly hundreds of missions each day and need expert servicing to remain safe and ready to fly. To keep those aircraft flying, we have a dedicated team of jet engine mechanics, hydraulic specialists and individuals who repair airframes and flight control systems. Your role may also extend beyond the skies as an expert responsible for maintaining missile and space systems.

ADMINISTRATIVE

Managing information and resources is critical in the Air Force. The growing demand for timely and highly accurate information is essential for Air Force decision-makers to carry out operations around the world. You'll be at the forefront of that information flow — leading and providing support in such jobs as personnel, radio communications systems, airfield management, logistics plans and operations resource management. The critical need for information in a global information age makes these administrative positions some of the most vital jobs in helping to defend America.

GENERAL

The general aptitude area offers the broadest range of jobs. They include jobs that don't necessarily fit into one of the other qualification areas but are just as important. Your options could include the physically demanding jobs in special tactics, including pararescue and combat control. Other jobs include air traffic control, cryptologic linguist and those as first responders, including fire protection and security forces. Or, if you're interested in the growing medical arena, the general area is for you.

ELECTRONICS

High tech doesn't begin to describe some of the jobs you'll perform in electronics. The Air Force offers challenging careers in electronics, along with an opportunity to work with systems that are transforming

modern technology. Jobs include working on space systems, airborne communication systems, missile and space systems electronics, aircraft avionic systems and communication and navigation systems. If you want a chance to be at the forefront of technology, an Air Force job in electronics may be perfect for you.

BENEFITS

Regardless of which job you choose, the Air Force offers world-class training and an opportunity to develop leadership and management skills. On top of all this, the Air Force offers a comprehensive benefits package:

- 30 days of vacation with pay each year
- Automatically earn college credits
- Worldwide travel
- Comprehensive medical and dental care
- Food and housing allowances
